

System Changes Documentation

Coverage: October 8, 2026 only

Time zone: Philippine Standard Time / Asia/Manila (UTC+08:00)

Chronological record of implementation, database updates, interface refinements, and release activity. Times identify recorded completion, migration registration, or commit events; they do not imply an exact edit time for every line of code.

01 Reporting filters and database support

Date and time	Description
08 Oct 2026 04:30:47 AM	Latest main changes pulled Fast-forwarded from lydorg/main to commit 696705c. The working branch remained ui-refactor.
08 Oct 2026 05:04:21 AM	Quarterly reporting implemented locally Added shared year, quarter and custom-date controls for YORP Registry, Budget Requests, Liquidation Reports, Budget Monitoring, Allocation by Barangay and Activity Logs exports. Used Manila date boundaries and period-specific titles and filenames.
08 Oct 2026 05:10:22 AM	Quarterly export migration applied Added date boundaries to the paginated admin RPCs. Preserved permission checks and bounded pagination; verified rejection of invalid sessions and reversed ranges.
08 Oct 2026 05:16:53 AM	Reporting controls moved beside Export Placed Year and Period in the Budget Requests, Liquidation Reports, Activity Logs and YORP Registry headers. Removed redundant semester controls and duplicate period selectors in their export dialogs; added responsive wrapping.
08 Oct 2026 05:25:12 AM	Dynamic year and quarter filtering repaired Applied independent All Year / quarter filtering. Registry table, summary cards and export follow the selection. Budget and Liquidation queries clear stale rows while reloading. Liquidation uses report creation date, as requested.

02 Budget summaries, seed data and release

Date and time	Description
08 Oct 2026 05:28:54 AM	Year options simplified Limited reporting year choices to All Year, 2026, 2025 and 2024 for the seeded dataset. Monitoring period selections retain the explicit Apply period action.
08 Oct 2026 05:35:15 AM	Monitoring All Year and allocation context Applied complete-dataset and recurring-quarter support. Quarter views retain annual allocation context; All Year combines records across years. Years without a configured allocation remain identified as unconfigured.
08 Oct 2026 05:42:50 AM	Three dynamic Budget Request cards Applied Pending Review, Approved Budget and Released Budget summaries using the selected Year and Period across all matching records, independent of table pagination.
08 Oct 2026 05:51:51 AM	84-account seed quarter coverage repaired Distributed 2024 budget records across Q1-Q4 as 8/8/8/7; 2025 as 12/12/12/11; and 2026 Q1 as 6. Every listed quarter includes releases and liquidation reports. The repair initially preserved amounts and statuses and excluded the protected renewal test account.
08 Oct 2026 05:55:03 AM	Current-period defaults Year and Period filters now initialize to the current Philippine year and quarter (2026 Q4 on this date), including reporting pages and dialogs. All Year and All Periods remain selectable.
08 Oct 2026 05:59:50 AM	Unique project names and varied amounts Revised the marked fixture to 84 distinct project titles and varied requested, approved and released amounts across the seeded quarters, including 2025. Preserved dates, statuses, identities and non-seeded records; updated the seeder and preview catalog.
08 Oct 2026 06:02:50 AM	Dropdown chevron spacing Inset the shared Year and Period chevrons 12 pixels from the right edge.
08 Oct 2026 06:03:54 AM	Reporting changes committed and released Commit 12eb2f3 recorded reporting, seed and interface updates. The subsequent release was reported successfully pushed to txiaoqt/lydorg main by 06:04:12 AM. Vercel deployment status was not checked.

Reporting validation: 128 tests across 17 files passed; build, root TypeScript and whitespace checks passed. Application comparison reported no new diagnostics against 649 existing diagnostics. Database checks confirmed quarter coverage and 84 distinct normalized titles.

03 Documentation, registration upload and exports

Date and time	Description
08 Oct 2026 06:11:12 AM	Earlier October 8 change record The earlier Word/PDF record was narrowed to October 8 only, covering the morning reporting changes and seeded budget totals. This document extends coverage to the later October 8 work.
08 Oct 2026 08:18:05 PM	Reliable registration bulk uploads Added conditional TUS resumable uploads for larger PDFs, weak connections and transient standard-upload failures. Small PDFs on healthy connections retain standard upload. Uses the current organization token, unique object paths and 6 MiB chunks; preserves the 10 MB PDF limit.
08 Oct 2026 08:18:05 PM	Adaptive concurrency and transient retries Uses up to three uploads normally and one in slow/mobile mode. Transient failures reduce remaining work to one. Added bounded retries for network interruptions, timeouts, 429 and 5xx; validation, authorization, RLS and lock errors are not automatically retried.
08 Oct 2026 08:18:05 PM	Progress, Retry Failed and safe cleanup Added per-file progress and a manual slow-connection option in the Organization Portal and PWA. Successful uploads remain saved; retry processes failures only and reuses persisted drafts. Finalization respects locked documents. Confirmed metadata failures trigger best-effort cleanup of newly created objects.
08 Oct 2026 08:35:18 PM	Individual YORP organization PDF export Added Export Report to the organization drawer. Includes Organization Information, Accreditation, Classification, Leadership, Location, Contact Information, current-period YPOP Participation and Submitted Documents. Uses scoped loaders/cache without opening every tab or loading other organizations.
08 Oct 2026 08:35:18 PM	Report layout and document privacy Created a multi-page PDF with official styling, generated timestamp, page numbers, repeated table headers and a sanitized organization/URN filename. Documents appear as metadata only: no binary downloads, signed URLs or private Storage links. Master export, Section 35 reports and preview/download actions remain available.
08 Oct 2026 08:39:20 PM	Verified date and readable document statuses Replaced Founding Date with the actual Verified Date in the drawer and individual report. Document statuses use readable labels such as Approved, Rejected and Needs Revision, without color names or technical identifiers.

Validation and release status: Upload work passed 48 focused tests; organization report work passed 27 focused tests, with a six-page sample visually checked. Builds and root type checks passed with no new application diagnostics. These evening changes were local only: no push, deployment or database migration at their recorded completion. TUS resume state does not persist across reloads/browser closure.

04 Organization identity and historical protection

Work window: 08 Oct 2026, 08:54:30 PM - 10:14:16 PM.

The entries below share the task completion timestamp; they are parts of one implementation, not separately timed deployments.

Date and time	Description
08 Oct 2026 10:14:16 PM	Duplicate organization checks Implemented shared Unicode, case, punctuation, whitespace and conservative abbreviation normalization; indexed exact and barangay-based similarity candidates. Public checks return generic outcomes. Names and contact details are not treated as identity proof.
08 Oct 2026 10:14:16 PM	Signup and Google onboarding Added debounced checks with stale-response cancellation and neutral notices. Updated profile saves to use scoped updates for existing profiles, preserving server-reviewed identifiers and verification fields.
08 Oct 2026 10:14:16 PM	Authorized admin identity review Added four decisions: Confirm Different, Confirm Existing, Request More Information and Reject Unsupported Claim. Requires active admin/session permission checks, reasons and official evidence references; records reviewer/time and rejects stale decisions.
08 Oct 2026 10:14:16 PM	Canonical identity and historical ownership Prepared audited links to the original identity without merging records, transferring ownership or granting another account access. Historical budget, liquidation, accreditation, renewal, document and YPOP organization IDs remain protected. Renewal windows remain unchanged.
08 Oct 2026 10:14:16 PM	Database and deletion safeguards prepared Prepared profile verification and new-budget guards, private identity/audit tables and pre-cleanup retention checks for established history and identity holds. Prepared matching deletion Edge preflight. Retention is a review pause; account recovery and lawful archival/erasure require a separate design.
08 Oct 2026 10:14:16 PM	Identity validation and documentation 247 tests passed, including 21 local SQL tests; build and whitespace checks passed, with no new application type diagnostics. Documented matching limits, permissions, deletion consequences and recovery design. Real two-session concurrency and full Supabase/Edge integration checks remained outstanding.

Status at the end of October 8: Identity implementation and migration were prepared locally; the migration was still unapplied. Its live application occurred on October 9 and is outside this record. No automatic identity merge, financial reassignment or ownership transfer was performed.

Record sources: Dated task completion messages; Git commit 12eb2f3 and history; the previous October 8 change record; admin-quarterly-reporting.md; organization identity implementation report and validation logs. Migration registration timestamps were converted from UTC to Philippine time. Earlier October 5-6 changes are excluded.
